Intuit

Full Stack Software Developer I

Building software that solves real-world problems is what drives me every day. My experience spans from developing full-stack e-commerce platforms with integrated AI assistants to creating desktop utilities that streamline media management. By leveraging JavaScript, Java, and SQL, I have successfully deployed projects that handle everything from user interfaces to complex database interactions, ensuring a seamless experience from end to end. My technical toolkit, which includes Git for version control and Docker for containerization, allows me to maintain clean, scalable, and efficient codebases. I am particularly drawn to Intuit's commitment to innovation and financial empowerment, and I am eager to bring my proactive approach to your development team. I thrive in environments where I can combine my engineering background with modern web technologies to build robust solutions. I am confident that my ability to learn quickly and my hands-on experience with full-stack development make me a strong fit for the Software Developer I role. I would welcome the opportunity to discuss how my technical skills and passion for building high-impact applications can contribute to your team's success. Are you available for a brief conversation next week to explore this further?

Atentamente,

Jorge Jaime Sena
