Revel

Full Stack Software Engineer (Entry-Junior)

Building software that bridges the gap between complex logic and user-friendly interfaces is what drives me. My experience spans from developing full-stack web applications like 'El Grano de Oro' to creating robust desktop tools, always focusing on clean code and efficient architecture. I am particularly drawn to Revel because of your commitment to scalable solutions, and I am confident that my technical background aligns perfectly with your current needs.

Throughout my projects, I have leveraged JavaScript for dynamic front-end experiences and Java for backend stability, while managing data integrity through SQL. I am also comfortable working in modern development environments, utilizing Git for version control and Docker to ensure consistent deployment across different stages. My ability to integrate AI models into real-world applications demonstrates my proactive approach to solving technical challenges and my passion for continuous learning.

I am eager to bring my problem-solving mindset and my hands-on experience to your engineering team. I would welcome the opportunity to discuss how my skills in full-stack development can contribute to the success of your upcoming projects. Are you available for a brief conversation next week to explore how I can add value to Revel?

Atentamente,

Jorge Jaime Sena
