Baton Corporation

Junior Full Stack Engineer (\$250k - \$300k salary)

Building software that moves from concept to production is what drives me. My experience developing full-stack applications, such as my AI-integrated e-commerce platform, has allowed me to master the end-to-end lifecycle of a product. I am particularly drawn to Baton Corporation's commitment to innovation, and I am confident that my technical foundation in JavaScript and Java, combined with my ability to manage databases with SQL, aligns perfectly with your team's needs. Beyond just writing code, I thrive on solving complex problems independently, whether I am containerizing services with Docker or streamlining version control workflows using Git. My background in Industrial Engineering and my current studies in Multiplatform Application Development have instilled in me a disciplined, analytical approach to software architecture. I am eager to bring my proactive mindset and my hands-on experience with real-world deployments to your engineering team. I would welcome the opportunity to discuss how my technical skills and passion for building scalable solutions can contribute to the continued success of Baton Corporation. Are you available for a brief conversation next week to explore how I can add value to your current projects?

Atentamente,

Jorge Jaime Sena
