knowmad mood

Backend Engineer Node.js + IA (Semipresencial Barcelona)

Building scalable backend architectures and integrating AI-driven features is where I thrive. My recent work on 'El Grano de Oro' involved developing a full-stack e-commerce platform where I implemented custom AI recommendation algorithms and virtual assistants, directly aligning with the technical challenges your team is tackling at knowmad mood. I am eager to bring this hands-on experience with Node.js and AI integration to your backend engineering projects. Beyond my technical background in JavaScript and database management, I pride myself on my ability to learn rapidly and deploy production-ready solutions independently. My academic foundation in Industrial Engineering, combined with my current focus on Multiplatform Application Development, has sharpened my problem-solving skills and my capacity to bridge the gap between complex logic and user-centric applications. I am confident that my proactive approach to software development and my C1-level English proficiency will allow me to contribute effectively to your international team in Barcelona. I would welcome the opportunity to discuss how my background in building AI-enhanced web applications can support your current backend initiatives. Are you available for a brief conversation next week to explore how I can add value to your team?

Atentamente,

Jorge Jaime Sena
