ALTEN

Desarrollador/a Full Stack

Building software that bridges the gap between complex logic and user-friendly interfaces is what drives me. My experience developing full-stack projects, such as an AI-integrated e-commerce platform and desktop automation tools, has allowed me to master the end-to-end development lifecycle. I am particularly drawn to this role at ALTEN because of your commitment to innovative engineering solutions, which aligns perfectly with my technical background in JavaScript, Java, and SQL. Throughout my projects, I have consistently leveraged Docker for containerization and Git for version control to ensure scalable, production-ready code. My ability to integrate AI models into real-world applications, combined with a C1 English proficiency, enables me to contribute effectively to international teams and tackle complex technical challenges with autonomy. I am eager to bring my proactive approach and passion for clean, efficient code to your development team. I would welcome the opportunity to discuss how my technical skills and hands-on experience can support the ongoing success of your projects at ALTEN. Are you available for a brief conversation next week to explore how I can contribute to your team?

Atentamente,

Jorge Jaime Sena
