Deloitte

Full Stack Developer

Building software that bridges the gap between complex logic and user-centric design is what drives me. My experience spans from developing full-stack web applications like 'El Grano de Oro'—which integrates AI-driven recommendations—to creating robust desktop tools using Java and JavaScript. I thrive on solving technical challenges, whether it is optimizing database queries with SQL or containerizing applications with Docker to ensure seamless deployment. My background in Industrial Engineering, combined with my current studies in Multiplatform Application Development, has instilled in me a disciplined approach to problem-solving and a constant desire to refine my technical stack. I am particularly drawn to Deloitte's reputation for innovation and excellence in large-scale digital transformation projects. I am confident that my ability to adapt quickly to new environments and my hands-on experience with Git and modern web technologies would allow me to contribute effectively to your development team from day one. I would welcome the opportunity to discuss how my technical skills and proactive mindset align with the goals of your current projects. Are you available for a brief conversation next week to explore how I can add value to your team?

Atentamente,

Jorge Jaime Sena
