Cisco

Software Engineer

Building software that solves real-world problems is what drives me, and I have been following Cisco's innovations in networking and cloud solutions with great admiration. My background in full-stack development, combined with my hands-on experience integrating AI models like Gemini into production-ready applications, aligns perfectly with the technical challenges your team tackles daily. I am eager to bring my proactive mindset and technical versatility to your engineering department. Throughout my recent projects, such as developing a multi-language e-commerce platform with AI-driven recommendations and building desktop automation tools, I have honed my ability to manage the entire development lifecycle—from database architecture to user-facing interfaces. My proficiency in JavaScript, Java, and Docker, paired with a C1 level of English, allows me to contribute effectively to international teams and navigate complex technical documentation with ease. I am particularly drawn to Cisco's commitment to scalable, secure infrastructure and would love to contribute to your ongoing projects. I am confident that my ability to learn rapidly and my passion for automation would make me a valuable asset to your team. I would welcome the opportunity to discuss how my technical skills and project experience can support Cisco's goals. Are you available for a brief conversation next week to explore how I can contribute to your current engineering initiatives?

Atentamente,

Jorge Jaime Sena
