Software Developer Java, Python, AWS, Terraform | 100% Teletrabajo

Building robust, scalable software is what drives me, and your opening for a developer proficient in Java, Python, AWS, and Terraform aligns perfectly with my technical background and passion for automation. Having developed full-stack applications currently in production, I have gained hands-on experience in managing end-to-end lifecycles, from database architecture to deployment. My background in Industrial Engineering and my current studies in Multiplatform Application Development have instilled in me a rigorous approach to problem-solving and system design. I am particularly eager to apply my skills in Java and Python to your cloud-native environments, leveraging Terraform for infrastructure as code and AWS for scalable service delivery. I thrive in environments that demand continuous learning and technical autonomy, and I am confident that my proactive mindset will allow me to contribute effectively to your team's goals from day one. I would welcome the opportunity to discuss how my experience with AI integration and cloud-based deployments can add value to your current projects. Are you available for a brief conversation next week to explore how my profile fits your team's needs?

Atentamente,

Jorge Jaime Sena
