## Ovarro

Software Engineer - Level 1

Building software that solves real-world problems is what drives me, and my experience developing production-ready applications aligns perfectly with the challenges at Ovarro. I have spent the last few years bridging the gap between academic theory and practical implementation, focusing on full-stack development and AI integration. My recent work on 'El Grano de Oro' involved creating a complete e-commerce ecosystem with a custom AI assistant, which sharpened my ability to manage end-to-end development cycles and complex user requirements. Beyond web development, I have built robust desktop tools like my Music Downloader, demonstrating my proficiency in Java and JavaScript, as well as my ability to handle system-level tasks and cross-platform synchronization. I thrive in environments where I can leverage my technical versatility—ranging from SQL database management to Docker containerization—to deliver efficient, scalable solutions. My background in Industrial Engineering has instilled in me a rigorous, analytical approach to software architecture that I am eager to apply to your engineering team. I am confident that my proactive mindset and technical foundation will allow me to contribute effectively to Ovarro's mission from day one. I would welcome the opportunity to discuss how my skills in full-stack development and AI integration can support your current projects. Are you available for a brief conversation next week?

Atentamente,

**Jorge Jaime Sena**
