Capgemini

Junior Full-Stack Developer

Building software that moves from concept to production is what drives me every day. My experience developing full-stack applications, such as my AI-integrated e-commerce platform, has allowed me to master the end-to-end lifecycle of a project. I am particularly drawn to this Junior Full-Stack Developer role at Capgemini because it aligns perfectly with my technical background in JavaScript, Java, and SQL, combined with my hands-on experience using Docker for deployment and Git for version control.

Beyond just writing code, I thrive on solving complex problems and optimizing user experiences. Whether I am building responsive interfaces with HTML/CSS or managing backend logic, I focus on creating scalable and efficient solutions. My academic background in Industrial Engineering and Multiplatform Application Development has instilled in me a rigorous approach to architecture and a constant desire to learn new technologies.

I am eager to bring my proactive mindset and technical versatility to your team at Capgemini. I am confident that my ability to integrate AI features and manage full-stack deployments will allow me to contribute effectively to your ongoing projects from day one. I would welcome the opportunity to discuss how my skills and passion for software development can support your team's goals. Are you available for a brief conversation next week to explore how I can add value to your current initiatives?

Atentamente,

Jorge Jaime Sena
