REDPATH MINING

Full Stack Developer

Building scalable software that bridges the gap between complex backend logic and intuitive user interfaces is what drives my professional development. Having successfully deployed full-stack projects like 'El Grano de Oro', where I integrated AI-driven recommendation engines and automated administrative panels, I have developed a deep understanding of the entire development lifecycle. My technical foundation in JavaScript, Java, and SQL, combined with my experience in containerization with Docker, allows me to build robust applications that are ready for production environments. I am particularly drawn to Redpath Mining's commitment to innovation and operational excellence, and I am eager to apply my problem-solving skills to your engineering challenges. My background in Industrial Engineering and my current focus on Multiplatform Application Development have equipped me with a unique perspective on system efficiency and automation. I am confident that my ability to learn quickly and my hands-on experience with real-world deployments make me a strong fit for your team. I would welcome the opportunity to discuss how my technical background and passion for full-stack development can contribute to the continued success of Redpath Mining. Are you available for a brief conversation next week to explore how I can add value to your current projects?

Atentamente,

Jorge Jaime Sena
