Stantec

Application Developer

Building robust software solutions that bridge the gap between complex technical requirements and user-centric design is what drives me. My experience developing full-stack applications, such as the 'El Grano de Oro' e-commerce platform, has allowed me to master the integration of AI models like Gemini into real-world production environments. I am particularly drawn to Stantec's commitment to sustainable design and engineering, as my background in Industrial Engineering and my proficiency in Java, JavaScript, and SQL align perfectly with the technical challenges your team tackles daily.

Beyond my academic training in Multiplatform Application Development, I thrive on building tools that solve tangible problems, from desktop automation software to professional corporate web interfaces. I am comfortable working in international environments, backed by my Cambridge C1 English certification, and I am eager to apply my skills in Docker, Git, and database management to support Stantec's mission-critical projects.

I am confident that my proactive approach to learning and my hands-on experience in deploying scalable applications would make me a valuable asset to your development team. I would welcome the opportunity to discuss how my technical background and passion for innovation can contribute to your upcoming initiatives. Are you available for a brief conversation next week to explore how I can support your team?

Atentamente,

Jorge Jaime Sena
