Haystack

Junior Full Stack Developer

Building software that bridges the gap between complex logic and user-friendly interfaces is what drives me. My experience developing full-stack projects, such as an AI-integrated e-commerce platform, has allowed me to master the end-to-end development cycle. I am particularly drawn to Haystack because of your commitment to innovative tech solutions, and I am confident that my technical background aligns perfectly with your current needs.

Throughout my journey, I have built robust applications using JavaScript and Java, while managing data integrity with SQL. I am comfortable working in modern development environments, utilizing Git for version control and Docker to ensure seamless deployment across different stages. Whether it is crafting responsive front-end experiences with HTML and CSS or architecting back-end logic, I thrive on solving technical challenges independently and efficiently.

Beyond my technical skills, my background in Industrial Engineering and my C1 English proficiency enable me to approach problems with an analytical mindset and communicate effectively in international teams. I am eager to bring my passion for automation and AI integration to the Haystack team. I would welcome the opportunity to discuss how my hands-on experience with production-ready applications can contribute to your upcoming projects. Are you available for a brief conversation next week?

Atentamente,

Jorge Jaime Sena
