Cruit Group

Junior Software Developer

Building software that solves real-world problems is what drives me, and I have spent the last few years transforming that passion into functional, production-ready applications. My technical foundation spans from low-level logic in C and Java to modern web development with JavaScript, HTML, and CSS. I thrive on the challenge of full-stack development, whether I am architecting a database with SQL or containerizing services using Docker to ensure seamless deployment. My recent work, such as an AI-integrated e-commerce platform and a cross-platform desktop utility, demonstrates my ability to take a project from concept to deployment independently. I am particularly drawn to Cruit Group because of your commitment to technical excellence and innovation. I am confident that my proactive approach to problem-solving and my experience with Git-based workflows will allow me to contribute effectively to your development team from day one. I am eager to bring my technical versatility and my drive for continuous learning to your upcoming projects. I would welcome the opportunity to discuss how my background in software development and my hands-on experience with modern tech stacks can add value to your team. Are you available for a brief conversation next week to explore how I can support your current goals?

Atentamente,

Jorge Jaime Sena
