Arcus Search

Full Stack Developer

Building software that moves from concept to production is what drives me. My experience spans the full development lifecycle, from crafting responsive interfaces with HTML, CSS, and JavaScript to architecting robust backends using Java and SQL. I thrive on solving complex problems, whether it is integrating AI models into e-commerce platforms or streamlining workflows with Docker and Git to ensure seamless deployments. My projects, such as 'El Grano de Oro', demonstrate my ability to deliver functional, user-centric applications that solve real-world business needs. I am not just a developer; I am a builder who enjoys the challenge of turning requirements into scalable, high-quality code. I am eager to bring this proactive mindset and my technical versatility to the team at Arcus Search. I would welcome the opportunity to discuss how my background in full-stack development and my passion for continuous learning can contribute to your upcoming projects. Are you available for a brief conversation next week to explore how I can add value to your engineering team?

Atentamente,

Jorge Jaime Sena
