Women in Tech

Junior Software Developer - Met Office - EO

Building software that bridges the gap between complex data and user-friendly interfaces is what drives my professional journey. My experience developing full-stack applications, such as the 'El Grano de Oro' e-commerce platform, has allowed me to master the integration of AI models like Gemini to enhance user experience and automate business processes. I am eager to bring this hands-on technical background to the Met Office, where I can contribute to high-impact software solutions while continuing to grow as a developer.

Beyond my academic background in Industrial Engineering and Multiplatform Application Development, I thrive on building production-ready tools. Whether it is creating desktop applications with automated synchronization or deploying responsive web solutions, I focus on writing clean, efficient code. My proficiency in JavaScript, Java, and SQL, combined with a proactive approach to problem-solving, ensures that I can quickly adapt to the specific technical requirements of your development team.

I am particularly drawn to the Met Office's commitment to innovation and excellence. I would welcome the opportunity to discuss how my technical skills and passion for building scalable software can support your current projects. Are you available for a brief conversation next week to explore how I can contribute to your team?

Atentamente,

Jorge Jaime Sena
