Softnetla

Developer Junior

Building software that solves real-world problems is what drives me, and I have been following Softnetla's recent projects with great interest. My background in full-stack development, combined with a proactive approach to learning, makes me a strong candidate to contribute to your team as a Junior Developer. I thrive on turning complex requirements into functional, user-centric applications, whether it is through web development or desktop automation. In my recent projects, I have leveraged JavaScript, Java, and SQL to build scalable solutions, including an e-commerce platform with AI integration and automated desktop tools. I am comfortable working with Git for version control and Docker for containerization, ensuring that my code is clean, efficient, and deployment-ready. My technical foundation, paired with my ability to adapt quickly to new environments, allows me to hit the ground running on your current development initiatives. I am eager to bring my passion for clean code and problem-solving to Softnetla. I would welcome the opportunity to discuss how my skills and my hands-on experience with full-stack technologies can add value to your team. Are you available for a brief conversation next week to explore how I can contribute to your upcoming projects?

Atentamente,

Jorge Jaime Sena
