5DS

Programador de aplicaciones web

Building functional, user-centric web applications is what drives me every day. My experience spans the full development lifecycle, from crafting responsive interfaces with HTML and CSS to architecting robust backend logic using JavaScript and SQL. Projects like 'El Grano de Oro' demonstrate my ability to move beyond simple coding, integrating AI-driven features and automated workflows into live, production-ready environments. I thrive on solving complex technical challenges and am constantly refining my skills to deliver high-quality, scalable software solutions. My background in Industrial Engineering, combined with my current studies in Multiplatform Application Development, has instilled in me a disciplined approach to problem-solving and system architecture. I am eager to bring this proactive mindset and my technical proficiency to the team at 5DS, contributing to your ongoing web development projects. I would welcome the opportunity to discuss how my hands-on experience with JavaScript and database management can support your team's goals. Are you available for a brief conversation next week to explore how I can add value to your upcoming initiatives?

Atentamente,

Jorge Jaime Sena
