Banco Hipotecario

Desarrollador Jr

Building robust software solutions that bridge the gap between complex business requirements and user-centric design is what drives my professional development. My experience spans from developing full-stack web applications to creating desktop tools that automate workflows, always focusing on scalability and clean architecture. I am particularly proud of my work on 'El Grano de Oro,' where I integrated AI models to provide personalized recommendations and automated customer support, demonstrating my ability to implement modern technologies in real-world production environments. My technical foundation in JavaScript, Java, and SQL, combined with my current studies in Multiplatform Application Development, allows me to tackle diverse challenges with a versatile mindset. I am eager to bring this proactive approach to the team at Banco Hipotecario, contributing to the stability and innovation of your digital banking services. I am confident that my ability to learn rapidly and my commitment to high-quality code will make me a valuable asset to your engineering department. I would welcome the opportunity to discuss how my technical skills and passion for problem-solving align with the goals of your team. Are you available for a brief conversation next week to explore how I can contribute to your upcoming projects?

Atentamente,

Jorge Jaime Sena
