DEVOCHO

Desarrollador de Software Junior

Building software that solves real-world problems is what drives me every day. At 21, I have moved beyond academic theory by deploying full-stack applications like 'El Grano de Oro,' where I integrated Gemini AI to provide personalized product recommendations and automated customer support. My approach combines technical rigor with a constant desire to ship functional, high-quality code. Whether I am developing desktop tools like my Music Downloader or crafting responsive web platforms, I focus on creating seamless user experiences backed by robust architecture. My background in Industrial Engineering and current studies in Multiplatform Application Development have equipped me with a strong analytical mindset, allowing me to adapt quickly to new tech stacks and complex requirements. I am particularly drawn to DEVOCHO because of your commitment to innovation and high-performance software solutions. I am eager to bring my experience with JavaScript, Java, and Docker to your team, contributing to projects that demand both creativity and technical precision. I would welcome the opportunity to discuss how my hands-on experience and proactive problem-solving skills can add immediate value to your development team. Are you available for a brief conversation next week to explore how I can contribute to DEVOCHO's upcoming goals?

Atentamente,

Jorge Jaime Sena
