SONDA

Desarrollador de SW 2

Building software that solves real-world problems is what drives me, and I have been following SONDA's impact on digital transformation with great interest. My background in full-stack development, combined with a hands-on approach to deploying production-ready applications, aligns perfectly with the technical requirements of your Software Developer 2 position. In my recent projects, such as 'El Grano de Oro,' I successfully integrated AI models like Gemini to create personalized user experiences, demonstrating my ability to bridge the gap between complex backend logic and intuitive frontend interfaces. Beyond web development, I have built robust desktop applications using Java and JavaScript, always focusing on scalability and clean architecture. My experience with Docker and Git ensures that I can contribute effectively to your development workflows from day one. I am particularly drawn to SONDA's commitment to innovation and would love to bring my proactive, problem-solving mindset to your engineering team. I am eager to discuss how my technical skills and my experience in deploying end-to-end solutions can support your upcoming projects. Are you available for a brief conversation next week to explore how I can contribute to your team?

Atentamente,

Jorge Jaime Sena
