Paces

Software Engineer (Junior)

Building software that solves real-world problems is what drives me every day. My experience goes beyond academic theory, as I have successfully deployed full-stack web applications and desktop tools that are currently in production. For instance, I recently developed an e-commerce platform for a local business, integrating AI-driven recommendation systems and virtual assistants using Gemini, which significantly enhanced the user experience. My technical foundation in JavaScript, Java, and SQL, combined with my ability to containerize applications using Docker, allows me to bridge the gap between complex requirements and clean, functional code. I am particularly drawn to Paces because of your commitment to innovative software solutions, and I am eager to bring my proactive approach to your engineering team. My background in Industrial Engineering and my current studies in Multiplatform Application Development have instilled in me a disciplined, analytical mindset that I apply to every project I undertake. I am confident that my hands-on experience with end-to-end development and my C1 proficiency in English will allow me to contribute effectively to your team from day one. I would welcome the opportunity to discuss how my technical skills and passion for automation can support the goals of Paces. Are you available for a brief conversation next week to explore how I can add value to your current projects?

Atentamente,

Jorge Jaime Sena
