22nd Century Technologies Inc.

Junior Web Developer

Building functional, user-centric web applications is what drives me. My experience spans the full development lifecycle, from crafting responsive interfaces with HTML and CSS to managing complex data structures using SQL and JavaScript. Projects like 'El Grano de Oro' demonstrate my ability to deploy production-ready solutions that integrate advanced features, such as AI-driven recommendations, while maintaining a seamless user experience. I thrive on solving technical challenges independently and am eager to bring this proactive mindset to the team at 22nd Century Technologies Inc. My background in both software development and industrial engineering has equipped me with a rigorous approach to problem-solving and a deep appreciation for efficient, scalable code. I am confident that my technical foundation and passion for continuous learning will allow me to contribute effectively to your ongoing projects from day one. I would welcome the opportunity to discuss how my skills in JavaScript and database management align with the goals of your development team. Are you available for a brief conversation next week to explore how I can add value to your upcoming initiatives?

Atentamente,

Jorge Jaime Sena
