Superdrug

Junior Developer

Building software that solves real-world problems is what drives me, and I have been following Superdrug's digital transformation with great interest. My experience developing full-stack applications, such as my AI-integrated e-commerce platform 'El Grano de Oro', has given me a solid foundation in creating user-centric interfaces and managing backend databases. I am confident that my technical background in JavaScript, Java, and SQL, combined with my ability to deploy production-ready solutions, makes me a strong fit for your development team. Beyond my formal studies in Multiplatform Application Development, I thrive on autonomy and continuous learning. Whether it is automating music library management with desktop applications or integrating AI models like Gemini to enhance user experience, I am always looking for ways to optimize performance and functionality. My C1 English proficiency ensures I can collaborate effectively in international environments and contribute to your team's success from day one. I would welcome the opportunity to discuss how my passion for clean code and scalable architecture can support Superdrug's upcoming projects. Are you available for a brief conversation next week to explore how I can contribute to your team?

Atentamente,

Jorge Jaime Sena
