Arcus Search

Full Stack Developer

Building software that moves from concept to production is what drives me every day. My experience spans the entire development lifecycle, from crafting responsive interfaces with HTML, CSS, and JavaScript to architecting robust backend logic using Java and SQL. I thrive on solving complex problems, whether I am optimizing database queries or containerizing applications with Docker to ensure seamless deployment environments. My background in both Industrial Engineering and software development allows me to approach technical challenges with a unique, analytical perspective. I have successfully deployed full-stack projects, including an AI-integrated e-commerce platform and desktop automation tools, which have sharpened my ability to deliver functional, user-centric solutions. I am eager to bring this hands-on technical expertise and my proactive problem-solving mindset to the development team at Arcus Search. I am confident that my ability to adapt quickly to new technologies and my commitment to clean, efficient code will make me a valuable asset to your ongoing projects. I would welcome the opportunity to discuss how my background aligns with your current goals and how I can contribute to your team. Are you available for a brief conversation next week to explore this further?

Atentamente,

Jorge Jaime Sena
