Orix Digi

Junior Full Stack Web Developer - Europe

Building functional, production-ready applications is what drives me. My experience spans the entire development lifecycle, from crafting intuitive front-end interfaces to managing robust back-end databases. Recently, I developed 'El Grano de Oro,' a full-stack e-commerce platform where I integrated AI-driven recommendation engines and virtual assistants, demonstrating my ability to leverage modern JavaScript ecosystems to solve real-world business challenges. Beyond web development, I enjoy building complex desktop tools and automating workflows, always focusing on clean, scalable code. My technical foundation in JavaScript, SQL, and Docker, combined with a proactive approach to learning, allows me to adapt quickly to new tech stacks and contribute effectively to agile teams. Having a C1 English certification, I am fully prepared to collaborate in international environments and engage with global documentation seamlessly. I am eager to bring my passion for full-stack development and AI integration to the team at Orix Digi. I would welcome the opportunity to discuss how my hands-on experience with deployed projects can add value to your upcoming initiatives. Are you available for a brief call next week to explore how I can contribute to your development goals?

Atentamente,

Jorge Jaime Sena
