Bending Spoons

Graduate AI software engineer

Building software that bridges the gap between complex logic and user-centric experiences is what drives me. My journey as a developer has been defined by taking projects from concept to production, such as my recent work on 'El Grano de Oro,' where I integrated Gemini AI to create a personalized recommendation engine and a virtual assistant for an e-commerce platform. This hands-on experience with LLMs and full-stack development has prepared me to tackle the challenges of an AI-focused engineering role. Beyond my technical background in JavaScript, Java, and Docker, I am deeply committed to the intersection of software engineering and artificial intelligence. My academic foundation in Industrial Engineering, combined with my practical experience in deploying real-world applications, allows me to approach problems with both analytical rigor and creative problem-solving. I am eager to bring my proactive mindset and my ability to build scalable, AI-driven solutions to the team at Bending Spoons. I would welcome the opportunity to discuss how my technical skills and passion for automation can contribute to your upcoming projects. Are you available for a brief conversation next week to explore how I can add value to your engineering team?

Atentamente,

Jorge Jaime Sena
