Microsoft

Software Engineer

Building software that solves real-world problems is what drives me, and the opportunity to contribute to Microsoft's engineering team is the perfect next step for my career. My background in Industrial Engineering and Software Development has allowed me to bridge the gap between complex technical architecture and user-centric applications. I have spent the last few years building and deploying full-stack solutions, such as an e-commerce platform integrated with Gemini AI for personalized recommendations, which taught me how to scale features and manage production environments effectively. Beyond web development, I have engineered desktop applications using Java and JavaScript, focusing on automation and seamless user experiences. My technical toolkit, including Git, Docker, and SQL, is complemented by a strong ability to learn new frameworks rapidly and adapt to high-pressure environments. I am particularly drawn to Microsoft's commitment to innovation in AI and cloud computing, and I am eager to bring my proactive mindset and hands-on experience to your team. I would welcome the chance to discuss how my technical projects and passion for software engineering align with your current goals. Are you available for a brief conversation next week to explore how I can contribute to your upcoming projects?

Atentamente,

Jorge Jaime Sena
