Caja Rural de Aragón

Desarrollador/a Fullstack Junior | Zaragoza | Caja Rural de Aragón

Building robust software solutions that bridge the gap between user-facing interfaces and complex backend logic is what drives my daily work. My experience developing full-stack projects, such as my AI-integrated e-commerce platform, has allowed me to master the synergy between JavaScript, HTML, and CSS for the frontend, while leveraging Java and SQL to ensure reliable data management and system architecture. I am particularly drawn to the opportunity at Caja Rural de Aragón because of your commitment to digital innovation in the financial sector. My background in both Software Development and Industrial Engineering has equipped me with a unique analytical mindset, enabling me to solve technical challenges efficiently while maintaining a focus on scalability and performance. Beyond my academic training, I have consistently deployed real-world applications, proving my ability to take a project from concept to production independently. I am eager to bring my technical versatility and proactive problem-solving skills to your development team. I would welcome the chance to discuss how my hands-on experience with Java and modern web technologies can contribute to the ongoing digital transformation at Caja Rural de Aragón. Are you available for a brief conversation next week to explore how I can add value to your current projects?

Atentamente,

Jorge Jaime Sena
