## **METRICA**

Programador/a Junior Full Stack

Building software that solves real-world problems is what drives me, whether it is developing a full-stack e-commerce platform with AI integration or creating desktop automation tools. My technical foundation in JavaScript, Java, and SQL allows me to bridge the gap between complex backend logic and intuitive user interfaces, ensuring that every project I touch is both functional and scalable. I am particularly drawn to the Junior Full Stack role at METRICA because of your commitment to innovative development, and I am eager to bring my hands-on experience with Docker and Git to your engineering team. Beyond my formal studies in Multiplatform Application Development and Industrial Engineering, I have spent the last few years deploying production-ready applications. I thrive in environments that demand rapid adaptation and technical problem-solving, and I am confident that my proactive approach to development will allow me to contribute to your team's success from day one. I would welcome the opportunity to discuss how my background in full-stack development and my passion for building efficient software align with the goals of your team. Are you available for a brief conversation next week to explore how I can add value to METRICA?

Atentamente,

**Jorge Jaime Sena**
