Cognizant

Full Stack Software Developer Junior

Building software that solves real-world problems is what drives me every day. My experience spans from developing full-stack web applications like 'El Grano de Oro'—which integrates AI-driven recommendations—to creating robust desktop tools using Java and JavaScript. I thrive on the challenge of bridging the gap between complex backend logic and intuitive user interfaces, ensuring that every project I touch is not just functional, but scalable and efficient. My technical toolkit, including Docker for containerization, Git for version control, and SQL for database management, allows me to hit the ground running in fast-paced environments like Cognizant. I am particularly drawn to this role because it aligns perfectly with my passion for continuous learning and my commitment to delivering high-quality, production-ready code. I am eager to bring my proactive mindset and technical versatility to your development team. I would welcome the opportunity to discuss how my background in building end-to-end applications can contribute to the success of your upcoming projects. Are you available for a brief conversation next week to explore how I can add value to your team?

Atentamente,

Jorge Jaime Sena
