ASHBY

Staff Design Engineer - EU

I have been following Ashby's growth and was particularly struck by your philosophy on Design Engineering. The idea that a single individual can bridge the gap between UI/UX and technical implementation to create 'magical' outcomes resonates deeply with my own approach to software development. In my recent projects, such as my AI-powered e-commerce platform, I have consistently taken ownership of the entire stack—from designing the user flows and interfaces to implementing the backend logic using TypeScript, Node.js, and Postgres. My work on 'El Grano de Oro' required me to balance aesthetic design with complex functionality, including AI integration and automated notification systems. I thrive in environments where I can iterate quickly based on user feedback rather than relying on heavy, rigid processes. I am confident that my hands-on experience with React, GraphQL, and CSS, combined with my passion for building intuitive, high-performance tools, would allow me to contribute immediately to your team. I am eager to bring my technical versatility and design-first mindset to Ashby to help scale your platform. I would welcome the opportunity to discuss how my background aligns with the challenges your team is currently tackling. Are you available for a brief conversation next week?

Atentamente,

Jorge Jaime Sena
