Cisco

Software Engineer

Building scalable software that bridges the gap between complex backend logic and intuitive user experiences is what drives me. My recent work on 'El Grano de Oro' demonstrates my ability to deploy full-stack solutions, specifically integrating AI models like Gemini to enhance user interaction and personalization. I thrive on solving technical challenges, whether it is optimizing desktop applications or architecting web platforms from the ground up.

My background in Industrial Engineering combined with my current studies in Multiplatform Application Development has equipped me with a unique analytical mindset. I am comfortable working with JavaScript, Java, and SQL, and I am particularly excited about the opportunity to apply my experience with Docker and Git to the robust engineering environment at Cisco. I am a fast learner who enjoys taking ownership of projects from initial concept to production.

I am eager to bring my technical curiosity and proactive problem-solving skills to your team. Could we schedule a brief conversation to discuss how my hands-on experience with AI-driven applications and full-stack development can contribute to Cisco's ongoing innovation?

Atentamente,

Jorge Jaime Sena
