Scotiabank

Junior Software Engineer-Global Payments Engineering

Building robust, scalable software is what drives me, and I have spent the last few years bridging the gap between academic theory and real-world production environments. My experience developing full-stack applications—such as my e-commerce platform with integrated AI assistants—has sharpened my ability to handle complex logic, database management, and seamless user experiences. I am particularly drawn to the Global Payments Engineering team at Scotiabank because of the technical rigor required to manage high-stakes financial transactions and the opportunity to work within a global infrastructure. My background in Java and SQL, combined with my proficiency in Docker and Git, allows me to contribute effectively to secure and efficient payment systems from day one. Beyond my technical skills, my C1 English proficiency and experience in self-directed project management ensure that I can collaborate effectively in international, fast-paced environments. I am eager to bring my proactive problem-solving mindset to your engineering team and contribute to the reliability of your payment solutions. I would welcome the opportunity to discuss how my hands-on experience with production-ready applications aligns with the goals of your engineering department. Are you available for a brief conversation next week to explore how I can add value to Scotiabank?

Atentamente,

Jorge Jaime Sena
