Nike

Software Engineer I, ITC

Building scalable software that bridges the gap between user needs and technical execution is what drives me. My experience developing full-stack applications, such as the 'El Grano de Oro' e-commerce platform, has allowed me to master the integration of AI models like Gemini into production environments. I am particularly drawn to the Software Engineer I role at Nike because of the company's commitment to innovation and high-performance digital experiences. My technical background in JavaScript, Java, and SQL, combined with my ability to deploy robust web and desktop solutions, aligns perfectly with the engineering standards at Nike. Beyond my formal education in Multiplatform Application Development and Industrial Engineering, I thrive on solving complex problems independently and adapting quickly to new tech stacks. I am confident that my proactive approach to development and my C1 English proficiency will allow me to contribute effectively to your team from day one. I would welcome the opportunity to discuss how my hands-on experience with automated systems and full-stack architecture can support Nike's upcoming technical initiatives. Are you available for a brief conversation next week to explore how my skills align with your team's goals?

Atentamente,

Jorge Jaime Sena
