SOIN Dominicana

Junior Software Developer

Building software that bridges the gap between complex logic and user-centric design is what drives me. Having developed and deployed full-stack projects like 'El Grano de Oro', I have gained hands-on experience integrating AI models like Gemini into real-world applications, ensuring seamless functionality from the database to the frontend. My background in Industrial Engineering combined with my current studies in Multiplatform Application Development has equipped me with a rigorous approach to problem-solving and system architecture.

I am particularly drawn to the Junior Software Developer role at SOIN Dominicana because of your commitment to innovative tech solutions. My technical toolkit, which includes JavaScript, Java, and Docker, allows me to adapt quickly to new environments and contribute effectively to team goals. I am comfortable working in international settings, supported by my C1 Cambridge English certification, and I thrive when tackling technical challenges that require both creativity and precision.

I am eager to bring my proactive mindset and my experience in deploying production-ready software to your team. I would welcome the opportunity to discuss how my skills in full-stack development and AI integration can support the ongoing success of your projects. Are you available for a brief conversation next week to explore how I can contribute to SOIN Dominicana?

Atentamente,

Jorge Jaime Sena
