VOIS

Junior Software Developer

Building software that bridges the gap between complex logic and user-centric design is what drives my daily work. My experience developing full-stack applications, such as the 'El Grano de Oro' e-commerce platform, has allowed me to master the integration of AI models like Gemini to enhance user experience through personalized recommendations and automated support. I thrive on solving technical challenges, whether by architecting web solutions or building robust desktop tools like my Music Downloader Pro, which features seamless WiFi synchronization.

Beyond my technical proficiency in JavaScript, Java, and SQL, I bring a strong analytical mindset from my Industrial Engineering background. I am particularly drawn to VOIS because of your commitment to innovation and scalable technology. My ability to adapt quickly to new stacks and my proactive approach to deployment ensure that I can contribute effectively to your development team from day one.

I am eager to bring my passion for automation and full-stack development to your upcoming projects. Are you available for a brief conversation next week to discuss how my technical skills and hands-on experience with AI integration can support the goals of the VOIS team?

Atentamente,

Jorge Jaime Sena
