Xylem

Junior Software Developer

Building software that bridges the gap between complex technical requirements and intuitive user experiences is what drives me. My recent work on 'El Grano de Oro,' a full-stack e-commerce platform featuring AI-driven recommendations and a Gemini-powered virtual assistant, demonstrates my ability to deploy scalable solutions that solve real-world business problems. I am eager to bring this same proactive, hands-on approach to the Junior Software Developer role at Xylem.

Beyond web development, I have a strong foundation in Java, JavaScript, and SQL, complemented by experience in containerization with Docker and desktop application architecture. My background in Industrial Engineering, combined with my current studies in Multiplatform Application Development, has sharpened my analytical thinking and ability to manage end-to-end project lifecycles. I thrive in environments that demand continuous learning and technical versatility.

With a C1 Cambridge English certification, I am fully prepared to collaborate effectively within your international teams. I am confident that my technical background and passion for automation align perfectly with Xylem's commitment to innovation. I would welcome the opportunity to discuss how my skills can contribute to your upcoming projects; are you available for a brief conversation next week?

Atentamente,

Jorge Jaime Sena
