JD Software

Junior Software Engineer

Building software that solves real-world problems is what drives me, and seeing my projects like 'El Grano de Oro'—a full-stack e-commerce platform integrated with AI—go live has been a defining experience. My background in Industrial Engineering combined with my current studies in Multiplatform Application Development has equipped me with a unique perspective on both system architecture and user-centric design. I am particularly drawn to the Junior Software Engineer role at JD Software because of your commitment to innovative, scalable solutions. Throughout my journey, I have honed my skills in JavaScript, Java, and SQL, while mastering the integration of AI models like Gemini to enhance user experiences. I thrive in environments that demand rapid adaptation and independent problem-solving, and I am eager to bring this proactive mindset to your development team. My C1 English proficiency ensures I can collaborate effectively in international settings and engage deeply with technical documentation. I would welcome the opportunity to discuss how my hands-on experience with full-stack development and AI integration can contribute to the continued success of JD Software. Are you available for a brief conversation next week to explore how I can add value to your team?

Atentamente,

Jorge Jaime Sena
