Globixs

Junior Full-Stack Developer

Building functional, user-centric applications is what drives me, and I have been following Globixs' work in the software development space with great interest. My background in both Multiplatform Application Development and Industrial Engineering has provided me with a strong analytical foundation, which I apply daily to my full-stack projects. I am confident that my technical proficiency in JavaScript, HTML, CSS, and SQL, combined with my experience in Java, makes me a strong fit for your Junior Full-Stack Developer role. In my recent projects, such as an AI-integrated e-commerce platform, I have successfully managed the entire development lifecycle, from designing responsive front-end interfaces to architecting robust back-end databases. I thrive in environments that require rapid learning and independent problem-solving, and I am eager to bring this proactive mindset to your development team. I am particularly drawn to the opportunity to contribute to Globixs' ongoing projects while continuing to grow as a developer. I would welcome the chance to discuss how my technical skills and passion for building scalable software can add value to your team. Are you available for a brief conversation next week to explore how I can contribute to your upcoming development goals?

Atentamente,

Jorge Jaime Sena
