Julio Bellone y Asociados

Desarrollador Full Stack Jr / Jr+

Building software that solves real-world problems is what drives me, and I have followed the work at Julio Bellone y Asociados with great interest. My background in both Industrial Engineering and Software Development has allowed me to bridge the gap between complex logic and functional, user-centric applications. I am confident that my technical foundation and hands-on experience will allow me to contribute effectively to your development team from day one. Throughout my projects, such as 'El Grano de Oro,' I have successfully integrated AI-driven features with a robust full-stack architecture using JavaScript, SQL, and modern deployment tools like Docker. Whether I am managing databases or refining front-end interfaces, I prioritize clean code and efficient workflows. My ability to handle the full development lifecycle—from initial design to production—aligns perfectly with the requirements of your Full Stack Jr position. I am eager to bring my proactive mindset and technical versatility to your team. I would welcome the opportunity to discuss how my skills in Java, JavaScript, and containerization can support the upcoming projects at Julio Bellone y Asociados. Are you available for a brief call next week to explore how I can add value to your current development initiatives?

Atentamente,

Jorge Jaime Sena
