10xengineers

Software Engineer - AI Systems & Frameworks

I have been following the work at 10xEngineers with great interest, particularly your focus on bridging the gap between high-performance hardware and AI inference. As a developer who thrives on building robust software systems, I am eager to contribute to your mission of optimizing Vision and Generative AI workloads for custom accelerators. My background in both Industrial Engineering and software development has instilled in me a deep appreciation for performance-critical systems and efficient architecture.

In my recent projects, I have successfully integrated AI models into production environments, gaining hands-on experience with the complexities of model deployment and optimization. I am highly proficient in C++ and Python, and I am particularly drawn to the challenge of building scalable frameworks and APIs. I am comfortable working with low-level integrations and have a strong interest in leveraging tools like pybind11 to bridge Python-based ML workflows with high-performance C++ runtimes.

Beyond my technical skills, I am a fast learner who enjoys tackling complex problems, whether it involves optimizing memory management or building real-time pipelines using OpenCV. I am confident that my proactive approach to software engineering and my passion for AI systems would make me a valuable addition to your team. I would welcome the opportunity to discuss how my technical background aligns with your current projects and how I can contribute to your upcoming development goals. Thank you for your time and consideration.

Atentamente,

Jorge Jaime Sena
