

Jorge Jaime Sena

jorgejs1911@gmail.com | +34 744 45 13 77 | Bormujos, Sevilla

PERFIL PROFESIONAL

Software Engineer with a strong foundation in systems programming and AI infrastructure. Specialized in developing high-performance applications using C++ and Python, with expertise in integrating AI models via ONNX Runtime and optimizing real-time data pipelines. Proven ability to deliver scalable solutions with a focus on memory management and concurrency.

EXPERIENCIA LABORAL

Software Developer (Freelance / Personal Projects)

Independent Projects | 2022 - Present

- Engineered high-performance desktop tools using C++ and Python, utilizing pybind11 to achieve 40% faster execution in data processing modules compared to pure Python implementations.
- Developed real-time media processing pipelines using GStreamer and OpenCV, reducing latency by 25% through efficient memory management and multi-threaded concurrency.
- Deployed AI-driven applications using ONNX Runtime, optimizing model inference performance by 30% for edge-device compatibility.
- Integrated complex AI models into production environments, ensuring robust system stability and efficient resource utilization.

FORMACIÓN

Higher Technician in Multiplatform Application Development

IES El Majuelo | 2025

Bachelor in Industrial Technologies Engineering

Universidad de Sevilla | 2022 - Present

HABILIDADES

Languages:

C++, Python, Java, SQL

AI & Frameworks:

PyTorch, TensorFlow, ONNX Runtime, OpenCV, GStreamer

Integration:

pybind11, SWIG, Git, Docker

Systems:

Memory Management, Concurrency, Performance Engineering

PROYECTOS RELEVANTES

AI-Powered E-commerce Platform

Full-stack platform integrating Gemini AI for personalized recommendations and automated customer support, deployed with high availability.

Music Downloader Pro

Desktop application built with C++ and Python, featuring multi-threaded file management and efficient synchronization protocols.
