Paces

Software Engineer (Junior)

Building software that bridges the gap between complex logic and user-centric design is what drives me. My journey as a developer has been defined by taking projects from concept to production, such as my AI-integrated e-commerce platform, which leverages JavaScript and SQL to provide personalized user experiences. I thrive on solving technical challenges, whether it involves optimizing backend processes or containerizing applications with Docker to ensure seamless deployment.

My background in Industrial Engineering combined with my current studies in Multiplatform Application Development has equipped me with a rigorous approach to problem-solving. I am comfortable working across the stack, utilizing Java for robust logic and C for performance-critical tasks, while maintaining clean, version-controlled code via Git. I am particularly drawn to Paces because of your commitment to innovative engineering, and I am eager to bring my hands-on experience with real-world deployments to your team.

I am confident that my proactive mindset and technical versatility will allow me to contribute effectively to your ongoing projects. I would welcome the opportunity to discuss how my skills align with the goals of your engineering team. Are you available for a brief conversation next week to explore how I can add value to Paces?

Atentamente,

Jorge Jaime Sena
