Notion

Software Engineer, Early Career

Building software that solves real-world problems is what drives me, whether it is developing full-stack web applications or complex desktop tools. My recent work on 'El Grano de Oro,' an e-commerce platform featuring AI-driven recommendations, demonstrates my ability to bridge the gap between user-facing interfaces and robust backend logic. I am particularly drawn to this role because of the opportunity to contribute to high-impact products while leveraging my technical foundation in JavaScript, Java, and C.

Beyond my academic background in Industrial Engineering and Software Development, I have spent significant time mastering the tools that streamline modern development, including Git for version control and Docker for containerization. I thrive in environments that value clean code and efficient architecture, and I am eager to apply my experience in integrating AI models to enhance user experiences within your team.

I am confident that my proactive approach to problem-solving and my commitment to continuous learning make me a strong fit for your engineering team. I would welcome the chance to discuss how my technical skills and passion for building scalable software can contribute to your upcoming projects. Are you available for a brief conversation next week to explore how I can add value to your team?

Atentamente,

Jorge Jaime Sena
