Quinnacia Inc

Frontend Developer

Building scalable web applications that solve real-world problems is what drives me. My recent project, 'El Grano de Oro,' is a testament to this passion; I developed a full-stack e-commerce platform featuring AI-driven recommendations and a virtual assistant, which allowed me to hone my skills in React.js, Next.js, and RESTful service integration. I am particularly drawn to Quinnacia's mission to bridge the gap in career readiness, and I am eager to bring my technical background to your frontend team.

Throughout my development journey, I have prioritized clean, maintainable code and robust testing using Jest. My experience extends to managing complex build processes with Webpack and crafting responsive interfaces with advanced CSS. I am comfortable working in remote environments and am fully available during the required 10 AM to 1 PM EST window to collaborate effectively with your team.

I am constantly exploring new paradigms and technologies, and I am excited about the prospect of contributing to your UI/UX enhancements. You can explore my technical approach and project architecture on my GitHub profile at github.com/Jorgejs4. I would welcome the opportunity to discuss how my hands-on experience and dedication to high-quality software can support Quinnacia's goals. Are you available for a brief conversation next week?

Atentamente,

Jorge Jaime Sena
