Owen Thomas | B Corp™

Junior Full Stack Engineers | TypeScript | 4 Days Per Week LDN | D2C Start-Up | £40K - £60K

Building scalable, production-ready applications is what drives me, and your focus on D2C innovation at Owen Thomas aligns perfectly with my background in developing full-stack solutions. Having successfully deployed projects like 'El Grano de Oro', where I integrated AI-driven recommendation engines and automated workflows, I have developed a strong foundation in creating seamless user experiences that directly impact business growth. My technical journey has been defined by a hands-on approach to problem-solving, consistently pushing my limits to deliver robust software. While my current stack is rooted in JavaScript, I am actively transitioning my workflow to TypeScript to ensure type safety and maintainability in complex environments. I am eager to bring my experience in full-stack development, from database management to intuitive front-end interfaces, to your engineering team. I thrive in fast-paced environments where autonomy and continuous learning are key, and I am confident that my ability to adapt quickly will allow me to contribute to your mission from day one. I would love to discuss how my passion for building efficient, user-centric applications can support the continued success of your D2C platform. Are you available for a brief conversation next week to explore how I can add value to your team?

Atentamente,

Jorge Jaime Sena
