EXUS

Junior Software Engineer (Fully Remote)

Building software that bridges the gap between complex logic and user-friendly interfaces is what drives me. My experience developing full-stack applications, such as my AI-powered e-commerce platform 'El Grano de Oro,' has allowed me to master the integration of LLMs like Gemini while managing end-to-end deployment. I am confident that my technical foundation in JavaScript, Java, and SQL, combined with my ability to build production-ready tools, makes me a strong fit for the Junior Software Engineer role at EXUS. Beyond my academic background in Industrial Engineering and Multiplatform Application Development, I thrive in environments that demand rapid adaptation and independent problem-solving. Whether it is automating music library management with desktop applications or deploying responsive web solutions, I am committed to writing clean, scalable code that delivers real value. I am eager to bring my proactive mindset and technical versatility to your remote engineering team. I would welcome the opportunity to discuss how my hands-on experience with Docker, Git, and AI integration can contribute to the continued success of EXUS. Are you available for a brief call next week to explore how I can support your current development goals?

Atentamente,

Jorge Jaime Sena
