Graduate/Junior Software Engineer - Backend

Building robust backend systems is what drives me, and I have spent the last few years turning that passion into functional, production-ready software. My experience ranges from developing complex desktop applications to integrating AI-driven features into web platforms, always ensuring that the underlying architecture is scalable and efficient. I am particularly drawn to this role because it aligns perfectly with my technical focus on Java and SQL, which I have utilized to manage data-driven projects and optimize application performance. Beyond just writing code, I prioritize clean version control practices using Git to maintain high standards in collaborative environments. My background in Industrial Engineering, combined with my current studies in Multiplatform Application Development, has provided me with a strong analytical foundation for solving complex backend challenges. I am eager to bring my proactive problem-solving mindset and my ability to learn new technologies rapidly to your engineering team. I would welcome the opportunity to discuss how my technical background and hands-on experience with Java and database management can contribute to your upcoming projects. Are you available for a brief conversation next week to explore how I can add value to your team?

Atentamente,

Jorge Jaime Sena
