## Hadrian

All Levels: Frontend Software Engineer

Building intuitive and high-performance user interfaces is what drives my daily work. Having developed full-stack projects like 'El Grano de Oro' and 'Catering SanMor,' I have honed my ability to translate complex requirements into clean, responsive web experiences using JavaScript, HTML, and CSS. My approach goes beyond simple coding; I focus on creating seamless user journeys, whether by integrating AI-driven features or optimizing front-end architecture for real-world production environments. My background in Industrial Engineering, combined with my current studies in Multiplatform Application Development, has instilled in me a rigorous analytical mindset. I am particularly drawn to Hadrian's commitment to engineering excellence and would love to bring my technical versatility and proactive problem-solving skills to your frontend team. I am confident that my hands-on experience with modern web standards and my ability to learn new frameworks rapidly will allow me to contribute effectively to your ongoing projects. I would appreciate the opportunity to discuss how my technical background and passion for building scalable web applications align with the goals of your engineering team. Are you available for a brief conversation next week to explore how I can support your frontend development initiatives?

Atentamente,

**Jorge Jaime Sena**
